

My Portfolio

Portfolio Summary:

I am a seasoned software developer with a strong background in Shell, Java, and CSS. My extensive experience in system engineering and development operations has allowed me to handle both backend and frontend tasks effectively. Over time, I've been able to collaborate and manage code for multiple projects while employing DevOps methodologies.

One of my key projects involves the ALX System Engineering DevOps, which showcases my expertise in system engineering and DevOps. I employed Shell scripting for most tasks in this project, with the intent of sharing and collaborating code for development and operations tasks. This project was designed for educational purposes as it is part of the ALX program; a platform that aids in skills development in fields like software engineering.

Another project of note is "Cycle". This project was built with a tech stack mainly composed of Java. Its core functionality involves cycling through data, system processes, or user interface elements in software or app development. The possibilities and usages of this project are multiple and include product lifecycle

Projects

Project: alx-system_engineering-devops

Description: The "alx-system_engineering-devops" is a GitHub repository that is likely used for sharing, collaborating, or managing code for system engineering and DevOps projects or tasks as part of the ALX program. It may contain scripts, configurations, documentation, and other applicable resources related to system engineering or DevOps methodologies. The ALX program is a platform that helps in upskilling in fields like software engineering, thus the repository could be used for training or educational purposes as well.

Tech Stack: Shell

GitHub Link: https://github.com/ozokolosandra/alx-system_engineering-devops

Project: Cycle

Description: "Cycle" is a GitHub repository that may contain code, frameworks, or tools related to cycling through various data, processes, or UI elements in software or app development. This could also be a project on cyclic operations, like alarm cycles, product lifecycles, or even bike sharing systems. The specific contents and exact context depend on the creator's intent and description.

Tech Stack: Java

GitHub Link: <https://github.com/ozokolosandra/Cycle>

Project: Sandra.github.io

Description: This repository is likely to be a personal website or portfolio for a user named Sandra, hosted using GitHub's pages feature. The ".github.io" format is default for GitHub pages. It may contain different types of files showcasing Sandra's projects, skills, resume and blog posts, coded in HTML, CSS, JavaScript or other programming languages.

Tech Stack: CSS

GitHub Link: <https://github.com/ozokolosandra/Sandra.github.io>

Project: alx-system_engineering-devops

Description: The "alx-system_engineering-devops" repository on GitHub is likely dedicated to projects or codes related to system engineering and development operations. The term 'alx' could be a shorthand or abbreviation related to the specific context of these projects. This could involve scripts for server configurations, infrastructure-as-code deployments, automated build and deployment scripts, and more. The usage of "devops" suggests that the code stored in the repository follows DevOps practices.

Tech Stack: Shell
